## ICT Solution for Incomes of Collective Insurance

Pastor Vida is a Spanish insurance company Life and Pensions belonging to the group's economic Pastor Banking, constituted by a solid set of companies that diversify and strengthen its market presence.

The Group has a significant portfolio of insured with several thousand people and companies from the first level, with a network of bank branches across the country to market their products.

Its activity is geared to the business of Life, collective insurance and Finance, has an annual turnover of more than EUR 35 million and occupies a prominent place in the ranking of Life Companies...

### **Challenge**

To develop an ICT solution to the area of collective security for the outsourcing of incomes, which will be integrated with the offer of technological Tecnom for Pastor Vida.

Likewise, the solution should help to improve the tasks administration and the management of this new product quickly and easily. It was therefore necessary to include some calculations to align the data with other systems and ensure security in the handling of information. In addition to other objectives such as: consolidation of data on the core business "PISA"; accounting automatic movements, the homogenization of information in the central system.

### **Solution**

Tecnom professionals designed a specialized ICT solution address to the collective insurance for income from Pastor Life that will optimize the various tasks and activities associated with this new product, increase productivity and be integrated with the platform PISA, which was introduced in 1998.

In addition, the solution has successfully integrated within the control and methodology of the tool Case of DMD Tecnom, which contributes to the development of projects and includes facilities for generating program source code, with a significant savings in time and costs.

The application was developed under a standard IBM AS-400 (already been deployed in the company) who has spent years on the market, and covers an easy exit to the web, saving time in programming. As a flexible and scalable solution, it can adapt to future needs of the client, as well as the increase of this new insurance...
